Training Pathway to Operational Excellence

Introduction to QGIS

Introduction to QGIS

Spatial Vision's Introduction to QGIS course is held over one day and provides a comprehensive background to spatial information concepts. It then uses these concepts as the foundation in applying QGIS to meet your GIS and mapping needs.

This course covers the basics of QGIS which includes the main interface modules, data selection and query, editing and also map production.

Our training expertise is unparalleled and all of our trainers are accredited industry professionals and consultants.

On completion, candidates will have demonstrated their competence and ability to understand:

- The layout of QGIS application
- The editing tools
- The data import and export capabilities
- How to create a map for output

Course Formats

Spatial Vision's course format ensures that students get maximum benefit from the training day. Students work to complete practical exercises which consolidate the course material. They also benefit from peer group discussions.

Prerequisites

Spatial Vision's Introduction to QGIS is designed to build knowledge of the QGIS principles.

There are no prerequisites for this course.

Course Outline

- GIS concepts
- What is QGIS?
- Adding various data sources to QGIS
- Editing spatial data
- Style data
- Create a map output
- Perform basic spatial tasks

Who Should Attend?

The Spatial Vision's Introduction to QGIS course is specifically aimed at staff who will have direct responsibilities for the planning and implementation of QGIS at an operational level.

It will be equally useful for those already in a GIS role, specifically those who support the GIS functions, so that they can better appreciate how their activities will contribute towards the growth in maturity of the GIS process.

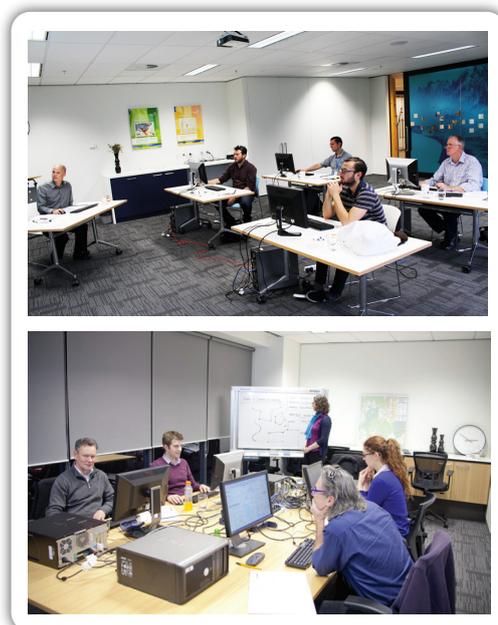

Training will contribute towards credit for two units of nationally accredited competency with TAFE NSW Riverina Institute
